

NITAMIN

NITAMIN™ fertilizer gives crops targeted foliar nutrition. With a low salt index and low levels of ammonia and biuret, it can safely be applied directly to the leaf’s surface for rapid absorption. Its short-to-medium-chain methylene urea helps smooth out the nitrogen release pattern, enabling NITAMIN to seamlessly act as a carrier for crop protection chemicals.

KEY BENEFITS

- Applied directly to the leaf surface for rapid absorption and green-up.
- The low salt index and low ammonia and biuret levels improve crop safety.
- Provides steady delivery of nutrients with high nitrogen concentration, enhanced foliar uptake and stays soluble longer.
- Compatible with a wide range of micronutrients and crop protection chemicals.

GUARANTEED ANALYSIS	
Nitrogen (N)	30%
% Slow Release	60%

Derived from: Triazone, Methylene Urea, and Urea
